SKILLS

- Programming Languages: Java, Python, and NodeJS
- Framework: Spring boot, Microservices, Angular, ReactJS, Redux, Kafka, Redis, hibernate (JPA), Struts
- Databases: Oracle, MySQL, MongoDB
- Tools & Technologies: Eclipse, STS, IntelliJ, SQL Developer, Maven
- Other Technologies: AWS, EC2, EKS, S3, RDS, Lambda, Civo, Unix Shell Scripting, Git, Bitbucket, Jira, Tomcat, Nginx, WebLogic, RESTful Web Services, Docker, Kubernetes.

LANGUAGES

- English
- Hindi

PROFILE INFO

Software Engineer with almost 4.5+ years of experience in the IT industry. My expertise includes developing applications by implementing business logic to provide the required output/solutions. I am seeking my next full-stack developer role that will leverage my expertise while providing opportunities for growth and enhancement of my technical abilities.

EXPERIENCE

SENIOR SOFTWARE ENGINEER CISCO LTD

July 2025 - Now

Project Description:

RAIDN is an enterprise-grade project portal developed for CISCO to manage, monitor, and streamline internal project workflows, data processing, and user interactions across multiple teams. The platform is built using a microservices architecture to ensure scalability, high availability, and performance.

Roles & Responsibilities:

- Designed and developed scalable backend microservices using Java and Spring Boot, following RESTful and domain-driven design principles.
- Implemented microservices architecture with inter-service communication and centralized configuration.
- Developed event-driven workflows using Apache Kafka for asynchronous data processing and system decoupling.
- Integrated Redis caching to improve application performance and reduce database load.
- Built and optimized REST APIs consumed by frontend applications developed using React (TypeScript, Redux).

- Worked with multiple databases, including Oracle and PostgreSQL for transactional data and MongoDB for unstructured and high-volume data.
- Implemented Docker-based containerization for microservices and deployed applications on Kubernetes clusters.
- Configured and maintained CI/CD pipelines using GitHub, enabling automated build, test, and deployment processes.
- Ensured application security, performance tuning, and exception handling across services.
- Collaborated with cross-functional teams, including QA, DevOps, and UI teams in an Agile/Scrum environment.
- Actively participated in code reviews, debugging production issues, and improving system reliability.

SOFTWARE ENGINEER

Jan 2024- March 2025

ICICI BANK

Java Full Stack Developer with hands-on experience in building scalable microservices-based applications for ICICI using Java and Spring Boot. Skilled in implementing event-driven architectures with Kafka, performance optimization using Redis, and deploying containerized services with Docker and Kubernetes. Experienced in CI/CD automation using GitHub, working with Oracle, PostgreSQL, and MongoDB, and developing responsive UIs using React (TypeScript, Redux) and Angular.

SOFTWARE ENGINEER

Feb 2022- Dec 2023

VODAFONE

- I developed an e-commerce web application by implementing a microservices architecture integrated with Angular, Java, Spring Boot, and Kafka.
- The application includes 6 to 7 services: API Gateway, Configuration Server, Service Registry, User Service, Order Service, Product Service, Payment Gateway, and Front-End in Angular.
- ♦ API Gateway
- The API Gateway serves as the entry point for all incoming requests to the microservices.
- It is responsible for routing requests to the appropriate services and handling authentication and authorization.
- Technologies used include Eureka, Spring Cloud, Kafka, and the Netflix Eureka Client Starter and Front-End in Angular
- Configuration server: This is a central repository for storing configuration data for the microservices. This data can be anything from database connection strings to API keys.
- Service Registry:- It is the backbone of all services because it connects the rest of the services.
- The API Gateway serves as the entry point for all incoming requests to the microservices.
- It is responsible for routing requests to the appropriate services and handling authentication and authorization.
- Technologies used include Eureka, Spring Cloud, Kafka, and the Netflix Eureka Client Starter.
- Acts as a central repository for storing configuration data for the microservices.
- This data can include anything from database connection strings to API keys.
- ♦ User, Order, and product services also.

TRAINEE

Sep 2021- Feb 2022

ECCS CUSTOM DEPARTMENT

- Developed and managed a Meeting Management Application using Java with the Spring Boot framework, Microservices architecture, Kafka for REST API communication, and Angular for the frontend.
- Developed a Regulatory Portal for report management using Java with the Struts framework.
- Created a Dashboard Portal for server monitoring using Java with Spring Boot, Microservices, Kafka for REST APIs, and Angular for the frontend.
- Built REST APIs for Dormancy Functionality in the Feasibility Portal using Java with Spring MVC.
- Implemented dynamic Employee Details Functionality in the SMP Portal using Java with Struts, and developed corresponding REST APIs for the Feasibility Mobile App using Java with Spring MVC.
- The role involved understanding business requirements, identifying appropriate technical solutions, and delivering implementations within specified timelines.
